SmartBorder ABI by South Ranch, Inc.

The SmartBorder line of software was designed to increase productivity for customs brokers, carriers, and self-directed importers. As U.S. Customs continues its emphasis on compliance, our team of developers and licensed customs brokers stays one step ahead, so you can focus on your business.

Our Technology Solution

SmartBorder's SaaS-based ACE application features cutting edge technology, such as data verification functions, real-time status updates and the ability to bypass redundant keying practices, to help you complete entries faster and more accurately – all backed by our industry-leading training and support, 24 hours a day, 7 days a week.

Key Features

The first ever internet based ABI solution – SmartBorder is the pioneer of internet based ABI and has developed a fast and user-friendly system that is years ahead of the competition.

Compete with brokers of any size – Technology is a critical component of being both competitive and efficient in today's environment. SmartBorder includes features that can directly impact your bottom line: Web tracking, e-billing, e-mail notifications, one screen entry, plus several tools that let you minimize computer time and maximize time with prospects.

Well supported – SmartBorder has maintained a 99% client retention rate since the company began. This is due in large part to the fast response and competency of the SmartBorder support team. Our team of licensed customs brokers provides professional support for a wide range of topics, from how to use the software to customs regulations and procedures, and any other issues that you may encounter. SmartBorder can also provide consulting services to review your entire import process.

ABI software specialists – SmartBorder specializes in ABI and compliance software, focusing all its efforts on improving the system for customs brokers and importers. By choosing our business-specific applications, clients can make the biggest impact on employee productivity, customer service and competitive advantage.

EDI integration – SmartBorder interfaces with several 3rd party applications, including systems for freight forwarding, accounting, inventory, dispatch and ERP. SmartBorder also supports a myriad of options for data integration, including XML, FTP, Web services, real-time processing, Microsoft Excel, CSV imports, and others.

The SmartBorder SaaS Advantage

SmartBorder is a powerful SaaS (or ASP) application that facilitates time-saving, customs-compliant importation of goods into the U.S.

Since we are a service provider, you can concentrate on your business instead of IT. There are many benefits to partnering with SmartBorder, including:

- Data backup every 15 minutes
- Technology updates to bring you the newest software quickly
- No need to be tied to an expensive file server
- Lower costs and faster implementation, with no special hardware or software to buy and maintain, and no IT staff required
- Built-in disaster recovery
- Native remote access – connect from any internet enabled PC
- High reliability and world-class security

SmartBorder is housed in a carrier class data center that includes redundant internet connections, HVAC systems, electrical circuits and diesel generators. The SmartBorder system supports redundancy at the server, storage, networking, software and database levels. A second data center serves as a disaster recovery site.

SmartBorder maintains a multimillion dollar infrastructure that incorporates best practices in physical and electronic security. We work to bring you a strong infrastructure that will keep your data safe and secure at all times.
